PSL Cricket Analytics

Power BI Portfolio — Executive Insights Report

Matches	**357**	**Deliveries**	**83,799**
Total Runs	**115,022**	**Wickets**	**4,503**
Fours	**10,006**	**Sixes**	**4,541**
Seasons	**2016–2026**	**Teams**	**8**

1. Project Scope

This dashboard analyzes 357 PSL matches across 11 seasons using 83,799 delivery records. The objective is to convert detailed cricket events into clear, decision-oriented views for league, team, player and bowling performance.

2. Executive Insights

League scoring: The dataset contains 115,022 total runs, supported by 10,006 fours and 4,541 sixes. Boundary production is therefore a major component of PSL scoring output.

Top run scorer: Babar Azam leads the supplied dataset with 4,380 runs. Fakhar Zaman is second with 3,370, while Mohammad Rizwan has 2,974.

Team scoring: Peshawar Zalmi has the highest aggregate batter runs at 19,353, followed by Islamabad United at 18,685. Aggregate totals should always be interpreted alongside season/match filters.

Bowling: Hasan Ali leads the wicket table in the supplied data with 140 bowler wickets. Economy rate and wickets per match provide better efficiency comparisons than wickets alone.

3. Top Batters

Player	Runs	Legal Balls	Strike Rate	4s	6s
Babar Azam	4,380	3,367	130.1	479	80
Fakhar Zaman	3,370	2,349	143.5	331	140
Mohammad Rizwan	2,974	2,312	128.6	277	75
RR Rossouw	2,609	1,785	146.2	260	106
Shoaib Malik	2,350	1,833	128.2	171	81

4. Top Bowling Leaders

Bowler	Wickets	Runs Conceded	Economy
Hasan Ali	140	3,229	8.45
Shaheen Shah Afridi	138	2,866	8.24
Shadab Khan	122	2,822	7.73
Wahab Riaz	111	2,624	8.05
Faheem Ashraf	104	2,580	8.88

5. Team Performance — How to Read the Dashboard

The Team Performance page should combine cumulative production with efficiency metrics. Runs, fours and sixes show output; strike rate, run rate and per-match values help separate volume from efficiency. Use season and team slicers to make like-for-like comparisons.

Team	Runs	Total Runs	4s	6s	Strike Rate
Peshawar Zalmi	19,353	20,485	1,782	838	137.3
Islamabad United	18,685	19,689	1,702	848	136.9
Lahore Qalandars	17,986	18,888	1,564	811	134.6
Karachi Kings	17,068	17,963	1,602	620	130.4
Quetta Gladiators	16,727	17,684	1,543	668	131.3

6. Recommended Business-Style Insights

• Identify teams that combine high scoring volume with strong scoring efficiency rather than ranking them only by total runs.

• Compare player impact using runs, strike rate and boundary contribution together.

• For bowlers, use wickets and economy jointly to identify both wicket-taking ability and run-control.

• Use season filters to avoid misleading cumulative comparisons when teams or players have different exposure across seasons.

• Use match and venue filters to investigate whether scoring patterns change by location or phase of the tournament.

7. Data & Methodology Notes

The source file is a merged ball-by-ball dataset. Delivery-level calculations use legal-ball indicators where appropriate. Boundary counts are based on the supplied is_four and is_six fields, while wickets use the supplied wicket flags. The report is descriptive and does not claim causality.

Portfolio takeaway: This project demonstrates end-to-end sports analytics in Power BI — from granular event data and cleaning through data modeling, DAX and executive visualization.
